Coding)

RELEASE DATE

September 2026

1 Welcome! What Does This Tool Do?

Welcome to **AI Subtitle & SRT Generator**! If you edit videos, you know how painful and time-consuming it is to manually listen to speech and type out subtitles line-by-line with timestamps.

This software uses cutting-edge Artificial Intelligence (OpenAI Whisper) to automatically listen to your video or audio files in **Bengali (বাংলা)**, **English**, or **Banglish (spoken dialect)** and produce a ready-to-use `.srt` subtitle file within minutes!

Saves Hours of Work

What used to take 3 to 4 hours of manual typing now takes only 2 minutes automatically!

Perfect Bengali & Banglish

Designed specifically to understand Bengali accents, mixed English terms, and local vocabulary.

Simple 1-Click Launch

No need to type code every time! Once set up, double-click a shortcut file to start editing.

2 One-Time Setup Guide (Step-by-Step for Beginners)

Before running the application for the very first time, you need 3 free helper tools installed on your computer. You only need to do this **once**!

Step A: Install Node.js (Required to run the Web App)

1. Go to <https://nodejs.org/> in your browser.
2. Download the "**LTS (Recommended For Most Users)**" installer.
3. Double-click the downloaded file and click **Next -> Next -> Finish** (keep all default settings).

Step B: Install Python (Required for the AI Speech Engine)

1. Go to <https://www.python.org/downloads/>.
2. Click the big yellow "**Download Python**" button.
3. **CRITICAL STEP:** When opening the installer, check the box that says "**Add python.exe to PATH**" at the bottom before clicking Install Now!

Step C: Install FFmpeg (Required for Audio Extraction)

- **On Windows:** Open Command Prompt and type: `winget install FFmpeg` and press Enter.
- **On Mac:** Open Terminal and type: `brew install ffmpeg` and press Enter.
- **On Ubuntu/Linux:** Open Terminal and type: `sudo apt update && sudo apt install -y ffmpeg`.

Step D: Initialize the Project (First Time Only)

Open your Terminal or Command Prompt in the project folder and copy-paste these 2 simple commands line-by-line:

```
# 1. Install all necessary packages (Takes 1-2 minutes)
npm install

# 2. Prepare the local database
npm run db:setup
```

3 How to Launch the App in 1-Click (No Code Needed!)

After completing the one-time setup, you **never need to open the command line again!** Use our 1-click launcher files:

Windows Users

Double-click the `start_app.bat` file inside the project folder.

It will automatically open your web browser at `http://localhost:3000` !

Mac / Linux Users

Double-click the `start_app.sh` script inside the project folder.

It will launch the app and open the page automatically.

Important Desktop Shortcut Tip:

Right-click `start_app.bat` (or `start_app.sh`) and select **Send to -> Desktop (Create shortcut)**. Now you can launch your AI Subtitle Generator straight from your Desktop anytime!

4 Complete Visual User Guide (Click-by-Click)

STEP 1

Upload Video

Drag & drop your video or audio file onto the screen.

STEP 2

Select Language

Choose Bengali, English, or Auto-detect.

STEP 3

Custom Vocabulary

Type important words to ensure accurate spelling.

STEP 4

Generate & Export

Review in editor and download your `.srt`` file.

Step 1: Uploading Your Video or Audio File

- Click anywhere on the big dashed box in the middle of the screen or drag your video file directly from your folder into the box.
- Supported formats:** MP4, MP3, WAV, M4A, MOV, MKV, WebM.
- File size limit:** Up to 500 MB.

Step 2: Choosing Language & Model Size

Setting	What to Select	When to Use It
Language	বাংলা (Bengali)	Select this for Bengali speech or mixed Banglish dialogue.
Language	English	Select this for English videos.
Model Size	Small (Default)	Best balance of high speed and strong accuracy for normal laptops.
Model Size	Medium / Large	Use on powerful computers for maximum precision on fast or noisy audio.

Step 3: Mastering "Custom Vocabulary" for Banglish & Technical Words

If your video contains specific technical terms, brand names, or mixed Banglish words (e.g. *"Adobe Premiere"*, *"বিটসিএল"*, *"লাইভ স্ট্রিমিং"*, *"ইউজার ম্যানুয়াল"*), type them into the **Custom Vocabulary / Prompt** text box separated by commas!

Real Example of Custom Vocabulary:

ভিডিও এডিটিং, সাবটাইটেল, টাইমস্ট্যাম্প, Premiere Pro, CapCut, ইউজার ম্যানুয়াল

By providing these hints, the AI speech model will spell these exact words flawlessly!

Step 4: Live Editing & Adjusting Timestamps

Once processing finishes, a live preview table appears on your screen:

- **Edit Words:** Click any text box to fix a typo or reword a line.
- **Edit Timestamps:** If a subtitle appears slightly too early or late, adjust the start time (e.g. `00:00:02,100`) or end time directly in the box.

Step 5: Downloading Subtitles for Your Video Editor

- Click **"Download SRT"**: Saves a standard `.srt` file to your Downloads folder.
- Click **"Download VTT"**: Saves a `.vtt` file (used for web players).
- Click **"Copy SRT"**: Copies all formatted subtitles to your clipboard so you can paste anywhere.

5 How to Import Subtitles into Video Editors

Follow these quick guides to bring your downloaded `.srt` file into your preferred video editing software:

Adobe Premiere Pro

1. Open your Premiere project.
2. Go to **File -> Import** and select your downloaded `.srt` file.
3. Drag the imported SRT file from the Project panel directly onto your timeline as a Caption track.
4. Style your subtitle font, color, and size in the *Essential Graphics / Captions* panel!

DaVinci Resolve

1. Open DaVinci Resolve and go to the **Edit Page**.
2. Right-click in the Media Pool and select **Import Media...** -> Pick your `.srt` file.
3. Drag the subtitle onto your timeline. It will automatically create a dedicated *Subtitle Track*.
4. Customize font and outline in the *Inspector -> Caption* tab.

CapCut (Desktop / Mobile)

1. Open your video in CapCut.
2. Click **Text** on the top menu -> Click **Local Captions / Import SRT**.
3. Select your downloaded `.srt` file.
4. CapCut will automatically align the subtitles with your video timeline!

YouTube Studio

1. Go to YouTube Studio and select your video.
2. Click **Subtitles** on the left menu.
3. Click **Add / Edit** -> Select **Upload file** -> Choose **With timing**.
4. Select your `.srt` file and click **Publish!**

6 Troubleshooting & FAQs (For Non-Techies)

? Question 1: I double-clicked `start_app.bat` but the browser says "This site can't be reached"?

Answer: Wait 5 to 10 seconds for the black server window to finish initializing. Do NOT close the black command window — it must stay open while you use the application!

? Question 2: It says "FFmpeg not found"?

Answer: FFmpeg is required to extract audio from video files. Open Command Prompt on Windows and type `winget install FFmpeg`, then restart your computer.

? Question 3: Some Banglish words are spelled wrong?

Answer: Simply type those tricky Banglish words into the **Custom Vocabulary Prompt** box before clicking Generate! The AI will automatically adopt your exact spellings.
